SUMMARY

Full-stack and AI engineer who ships production systems end to end. Final-year Computer Engineering student (SGPA 9.57) with 10+ freelance client projects delivered independently — from requirements and design through backend APIs, responsive frontends, deployment, and handover — including government projects and direct work with clients across industries. Strengths: Java/Spring Boot microservices and REST APIs, React frontends, Python automation, and RAG/LLM pipelines over vector embeddings, including a machine-learning system at 97.35% test accuracy. Open to remote roles worldwide.

TECHNICAL SKILLS

Languages: Java, Python, TypeScript, JavaScript, SQL
Backend: Spring Boot, REST APIs, Microservices, Node.js, Express, FastAPI, Flask, n8n automation
Frontend: React.js, Next.js, Tailwind CSS, WebSockets
AI/ML: RAG, Vector Embeddings, LangChain, OpenAI APIs, scikit-learn, NLTK, OpenCV, LLM patterns, Vapi voice AI
Data & Infra: MySQL, MongoDB, Supabase, Git, Docker, AWS, CI/CD, Vercel

EXPERIENCE

- **Freelance Full-Stack Developer — Self-employed (2023 — Present).** Delivered 10+ client projects end to end, including government projects: requirements gathering, responsive UI builds, backend APIs, deployment, and handover — working directly with clients across industries.
- **Backend Developer — Contract, Agency Client (Nov 2025 — Mar 2026).** Served as backend developer for an agency client; built and shipped backend systems and production APIs in a distributed team workflow.
- **Full Stack Developer Intern — Dream Technology (Jan 2023 — Apr 2023).** Full-stack internship with a global remote team; built and shipped web features across frontend and backend.

PROJECTS

- **E-commerce Platform — Full-Stack Online Store.** Built and deployed a working product: React storefront with catalog search, cart and checkout flow, order management, and an admin dashboard — backed by Spring Boot REST APIs with JWT authentication and MySQL persistence.
- **BugSense — AI-Powered Bug Tracker.** Production-style AI automation: n8n workflows auto-triage incoming issues on filing, and a RAG pipeline over vector embeddings semantically matches new issues against past resolved bugs to suggest fixes.
- **HMPV Disease Detection (ML/NLP).** End-to-end ML pipeline: NLP-based symptom extraction from clinical reports (NLTK); Random Forest, SVM, and XGBoost classifiers reaching 97.35% test accuracy on the held-out test set. Pandas data cleaning, scikit-learn training and evaluation, served through a Flask + MySQL backend.

EDUCATION

- **B.E. Computer Engineering — ISBM College of Engineering, Pune (2024 — 2027).** SGPA: 9.57
- **Diploma in Computer Engineering (2021 — 2024).** 84%.
- **SSC — Jawahar Vidyalaya, Andur.** 95.20%.

ACHIEVEMENTS

- Datathon — 3rd rank holder
- 3× Hackathon Winner
- Harvard Aspire Leaders Program — leadership certificate
- Avishkar — 1st rank
